

### Remarkable Statement by a Criminal

ber's, and had our nuptials formally celebrated. She was as good as her word. The articles were delivered into my possession. . . . I then told her that I was a married man; that I had a wife living a little distance down on the river and that I could not give up my present one. . . . The announcement threw her into an almost uncontrollable passion. I did not return home immediately but proceeded to Cross River. While there with Ray brother a personal appeared in one of the papers of the district advertising for me. It was from Miss . . . undoubtedly a different woman than the one who appeared after a former marriage and had stolen from her the articles which she had in fact given me. Though I paid out a different sum I had married her the night after a few days afterwards and brought to this town. On my arrival here I was committed for trial on Miss . . . affidavit. . . . The next day the court adjournment I gave one of the articles I had received from Miss . . . over to my brother, and a few days later I gave the other one over to my first wife for safe keeping. . . . On the 12th day of December last I sent my brother for an order on my brother for the goods which he had, promising that if I would do

tion, he was instantly brought face to face with the wretched victims of Intemperance, and the picture he drew of their miserable condition worked vastly upon the sensibilities of his audience. Last year, indeed, there were 50,000 persons arrested in the city of New York for offences, most of which could be traced to intemperance. Nine-tenths of the crimes were committed, he asserted, under the influence of drink. He stated—there were 1,000 billiard saloons and about 8,000 whiskey saloons in this city. He alluded to the great prevalence of Intemperance among women, and stated that two of the greatest evils among women in this city were playing pool and drinking whiskey. Last year, he stated, there were 10,000 women arrested in the city of New York for drunkenness. The speaker said that number would form a string eight miles long, and asked his audience to contemplate such a dreadful picture in fancy. He stated that some of the most eminent physicians in New York informed him that they had seen many cases of insanity that were a whole year of whiskey. A bright-faced woman had a short time before come to him and stated she was twenty-two years of age, and said she had been

Two letters were received from Father Secchi. In the first he stated that by spectrum analysis he had ascertained the presence of aqueous vapor in the vicinity of the solar spots. This fact was proved by the existence of certain nebulous stripes in the red and orange, near Kirchhoff's 500.6 and 504. He had further examined Sirius in its spectrum to verify whether the black stripes in the dog star corresponded with the hydrogen ones; he had indeed found  $\lambda$ ,  $\lambda$  and  $\lambda$  on both sides by two hundred  $\mu$ , and a pair of tellurium. In his second letter, dated the sixth inst., Father Secchi described his observation of  $\delta$  Geminae, a star which on the 10th and 11th inst. he observed with the magnifying, and which he expected to find in the sixth. It has the appearance of gold and in its spectrum the hydrogen series is brilliant, a very rare feature. Others, the principal of which correspond to the spectrum of Alpha Orionis) lie low in the magnesium region, between  $\gamma$  and  $\delta$ . What result was of the greatest importance is, that its spectrum answers closely to that of the temporary star of Corona, which appeared so suddenly in 1866.

On my arrival here I was committed for trial Miss — on a affidavit. As soon as I observed the excitement I gave some of the articles I had received from Miss — over to my brother and a few to my first wife for safe keeping. Logan came to me at this place on the 1st day of December last and asked me for an order on my brother for the bonds which he had, promising that if I would do said that number would form a strong link, and asked his sentence to come in the form of a picture in fancy. He stated the most eminent physicians in New York that there was not the slightest chance of a whole river of whiskey. A brig had a short time before come to him who was twenty-two years of age, and said
